Can you help Many thanks. MelanieThen press SET % for 2 seconds. I just did it on two of the calculators and it works. Hope this helps!It gives you the percent. Hope it helps. I think you accidentally activated the Exponential display format and did not pay attention to the small, raised 03 that came at the end of the number displayed. It is a common mistake for those not very familiar with Scientific or exponential notation. Let us try to reset your calculator to the normal floating point format. To have the number of decimal place you gave in your result 4 decimal digits, you press 1 to select Fix then 4. Be aware that scientific calculators usually stop displaying results in floating point format 0.0000045 if the number is smaller than 0.001. So basically, 0.00099 will be displayed as 9.9004, 04 being raised above the level, and in smaller size. Hope it helps. They were the successor models to the CFX9970G, the first Casio calculator with computer algebra system, or CAS, a program for symbolic manipulation of mathematical expressions. The calculators were discontinued and succeeded by the Casio ClassPad 300 in 2003. Casio had used different product names in France, following their French predecessors. It also uses one lithium battery CR2032 for a memory backup when the primary power is down. The backup battery can operate for about two years. Inside each mode, the bottom line is reserved for up to 6 function key menu tips, which can be selected from buttons F1 to F6 on the calculator's keyboard. The display's contrast can be adjusted from a system manager menu. The lower part of the keyboard consists of numeric and operational keys, where the EXE button is used to execute calculations and select commands. The middle part contains more sophisticated mathematical function keys, SHIFT and ALPHA keys, and directional pads.

The SHIFT and ALPHA keys are used to access functions and alphabets appearing on top of buttons. The top part consists of buttons F1 to F6, used to select function menu tips. The storage memory is used to store add-in applications, which can be loaded through a computer. Memory usage with listed categories can be viewed from a system manager menu. It has a size of 4 megabytes from a chip R27T3202L manufactured by OKI Electric Industry. Since the mask ROM is nonreprogrammable, the calculator operating system cannot be upgraded, unlike the newer Casio calculators. The flash ROM is a chip LP62S2048AX from AMIC Technology. It has an actual size of 1 megabyte and is reprogrammable. The RAM is a chip 29LV800CBTI from Macronix International. It

has an actual size of 256 kilobytes. They are all placed on the same motherboard. The calculators provide options to control what appears on a graph screen including graph range and zoom functions. Curves on the graph can be traced by a cursor, where local maximum, local minimum, and intersections of the curves can be solved by a graph solver tool. The calculators can solve simultaneous linear equations up to 30 unknown variables and polynomials of degrees up to 30. For instance, the calculators incorrectly calculate a third order Taylor's polynomial for The PC programs that deal with the communication are the FA123 and FA124 newer version PCLink, where transfers of data and screenshots are managed. The features added are advanced statistics calculations, financial calculations, differential equations, EA100 data logging, and tutorial modes. They can be accessed from the main calculator menu. Moreover, the calculators also support calculations of probability density and cumulative probability in the given basic probability distributions. The calculators employ a BASIC based programming language, unofficially named as CasioBASIC.

Ideal for middle school through college. TI Rechargeable battery From that well established platform, this new model adds more speed a processor that's 2.5 times faster, more memory 24 KB RAM and 480 KB of Flash ROM, an enhanced high contrast display eight lines by 16 characters, and more beloved Apps. Includes a USB Port and cable. It also adds USB on the go technology cable included that can be used to share files with other calculators or to connect to PCs or optional presentation tools. Comes with 12 preloaded Apps and supports all TI83 Apps. For students in math and sciences, the TI84 Plus is a powerful, problem solving tool with features for storing, graphing, and analyzing up to 10 functions.

Plus, it displays graphs and evaluates tables on a split screen, allowing you to trace the graph and scroll through table values simultaneously. Split screen lets you view a graph and its equation at the same time. With the TI84 Plus, you can view an equation, its graph, and the coordinates all at one time. Jump from point to point by entering a number. Several useful plot types are available, including scatter, box and whisker, XYline, histogram, and normal probability plots. Advanced statistics and regression analysis, graphical analysis, and data analysis are readily accessed, along with features for calculus, engineering, financial, logarithm, trigonometry, and hyperbolic functions all crucial tools for advanced analysis. With its clear display and fast processing, the calculator incorporates graphing tools for mathematics and science course work, including statistics and finance. The included normal slide case is great for desktop work. The TI84 Plus is powered by four AAA alkaline batteries not included and one silver oxide battery included for backup, with an automatic shutoff to save energy. It also comes with a hard normal slide case and is supported by a one year limited warranty. EZ Graphing Products LLC Videos for related products 059 Click to play

0 out of 5 stars Within an hour of using this calculator, the screen had 4 horizontal lines running across the entire screen, and within two weeks had about 20 of them. Did I mention that the calculator has only moved from a table to my hands and back, and has never been transported more than 3 feet. That's durability! Oh wait, that's sarcasm. I'd say within another week of use this calculator will be completely unusable. Tech support from Texas Instruments is worthless as well, as a replacement will take weeks. That's not really helpful when you're in the middle of a calculus class. Worst purchase I've made on Amazon so far. This is complete garbage. Replaced batteries twice. I used this during community college and still use it at work. Although there is an app that simulates this completely, Wabbitemu, there is no replacing the real thing. Plus you can take this into exams unless graphing calculators are not allowed. I think its memory functions are what make it so useful. I may have a few equations that I use all the time during a semester. I can write my own programs eg Celsius to Fahrenheit. I can save a few constants viscosity of water, earth's radius, etc.. Those come in handy on exams. But some professors come around and wipe your calculator before exams, so don't count on it. Its memory is also useful for making very precise calculations. Instead of typing in the previous answer or an answer five lines up, just copy it down. I have watched a few videos to learn all or most of the tricks, so helpful. This is a lifelong tool for engineers. Note Its not Mathematica or Matlab. If you want 3D graphing, that's the place to go. Also it can't simplify square roots. The course required the TI84. We use rechargeable batteries so I'm not concerned that it takes AAA batteries versus a rechargeable battery that comes with the TI84 Plus CE. The device is powered by 4 AAA batteries and a lithium battery backup to protect RAM. Additionally, the calculator comes preloaded with 12 apps.

If you need a computer algebra system, you should go with the If cost is a concern, get the Calculator was extremely dirty, buttons worn off and calculator was all written on. No backing on calculator or batteries provided. Advertised as "lightly used" — This was not that. Returned right away and will not be reordering ever again. Stay away. However, it arrived with notes scrawled all over the case in pencil, an odd gouge on one side, and it wasn't factory reset. While all of these problems are fixable, it shows a lack of quality control. Other buyers might not be so lucky buyer beware. At least the notes are useful. I had the same one year ago in high school and I remember it just the same. The design is good, with buttons clearly labeled and accessible. There are so many functions of use for the 84plus, and I am still discovering more every day. The reason I gave this 4 stars instead of 5 is because I find at times the display is difficult to read while graphing. I recommend the 84Plus for everyday graphing calculator needs. Tech from 20 yrs ago. Think about comparable devices available at this price way more advanced than this. Basically the same technology used 20 years ago. It was the model that she was advised to buy. I rang up customer services at the company selling this before I bought it to clarify a point and they were very helpful and polite. I think I rang up to see if it was available in purple and was informed yes but only in the USA. Here, in the UK, the only color available is black. Delivery I think was very quick. My daughter has been using it for a few months now and is very happy with it. It is expensive for a calculator so obviously it is one of those items that you have to buy.
