If you don't know what you're looking you'd pick up the pen and using it to write something never knowing it was also hidden camera Yes it does write as well. It has new controls so once the camera is recording nothing is lit up. It takes great still photos as well as sharp videos in both 720 and 1080 resolution. It comes with a 16gb of storage, which is more then adequate. The battery is good for about an hour of continuous video. So which the battery needs recharging there is still room left and you can download the video and start all over again once the battery is recharged. Of course you don't have to record continuously; you can put the camera into motion activated mode. It will only record when there is motion in front of the lens. When there is no movement the recording will stop. This will increase the length of time the camera will record. I'm including photos taken in indoors and outdoors as well as a video taken indoors, I would put an outdoor video as well but you can only post one video per review, so you can judge for yourself the quality of the video and photos. Because he is interested in different technological things such as hidden camera pen. He likes this.

Wonderful product, and can place nearly where you want. Take picture and recording video as well. Wonderful image quality. Worth buying more to put it at home when sometimes need. The price is not expensive. The pen itself was pretty easy to use, click the pen start recording. I found the pen a little off when holding it to write, the grip wasnt there, but I also have small hands. A person with bigger hands would probably not have an issue. I did like the way the pen wrote though and that it came with extra ink cartridges. The picture and video quality wasn't that bad and I was appreciative of the detailed instructions. One suggestion would be to have it be uploaded via bluetooth over wifi protected network.

I found it a little cumbersome to find a microSD card holder to then transfer to my computer for viewing since my phone doesn't support microsd storage. If you dont know it is a camera, you wont even suspect it. I am surprised that there are camera covers, switches, and resetters in such a small pen. And it can really be written, with three refills to replace, God, this can be used for many years. I bought this pen for my good friend of pregnancy. She is in a dangerous living environment, so I hope this video recorder can help her. Fancy built pen, easy to use most important very easy instructions. Usually the biggest problem is learning how to use these devices but this one is Perfect. Nice HD

video with crisp pictures as well. And the pen works too lol it writes very smooth, if you care about that. It turns on and appears to function via the led as it is supposed to. I plugged it into my PC and the led lit, but no drive showed up. I tried several different USB 2.0 and USB 3.0 ports with the same result. It shows up in device manager and in disk manager. In disk manager it shows as an unallocated drive. I tried making a simple volume and formatting it. I had to remove and plug it back in for it to show up as a drive, but still needed formatting. I formatted it and everything seemed ok. I removed it and plugged it back in several times to make sure it was all good, and it appeared so. I then removed it and tried out the camera. Everything appeared from the led as though it was functioning correctly, but when I put it back in the PC, same thing, no drive. Video quality is good and audio quality is decent considering its a camera in a pen. I have not used it enough to say how good the battery is but from the few times I have used it things were good.

<http://eco-region31.ru/bose-lifestyle-5-series-3-service-manual>

Camera can feel a little warm after 30 mins of use but nothing that caused me any concern as the device is pretty enclosed and was used while in a pocket and Ive felt similar warmth from using a cell phone for long periods of time. Just make sure you try out the camera before using it for your intended purpose. It helps to get a feel as to where to position the camera to capture what you are trying to record. This is important as you cant see what you are recording until after you record it. Being familiar with what the best height for the pen is will allow you to best capture what you want. It works like a charm. Just press the button on top and its starts recording. The red LED light is on the opposite side to conceal it from the person being recorded. Overall a good hidden camera for the price. NO	Name	Description
1	Operation key	It's a multi-functional key with different functions in different modes and states, including power-on, power-off, start to record video, stop recording video, take photos, start to record audio and stop recording audio.
2	Camera	Used to catch image signals
3	Mic	Used to catch the audio signals
4	Indicator lamps	There are three built-in red, green and blue indicator lamps, three lamps in three colors may indicate the different operating states of products in different combination modes.
5	Mode Switch	Used to switch over the operating modes
6	Standard 4 Pin USB	The interface for connecting the data line and power cord

Once you do your initial charging of the pen, which is usually about 4 hours, you will only have to recharge the pen for about 15 minutes from that point onward so you can use your pen quickly and as much as you want to. Your spy pen comes with a MicroSD card, you want to make sure that it's working properly and then inserted inside the pen so that you can record. You have to have the MicroSD card in order for the pen to work. Without it, the pen won't work as it's intended to.

Getting Started With Your Brand New Spy Pen This next step of the spy pen camera instructions require you to turn on your brand new spy pen and that's what you've been wanting to do since you got it isn't it. Now it's time to do so and in order to do that you need to click the top of the pen just like you would using any regular pen and you are on your way to becoming Tom Cruise in Mission Impossible. Once you have clicked the button at the top of the pen you should see a light which will tell you that the pen has turned on correctly and you are good to go. If you want to start recording from your pen you need to hold the same button that you used to turn on the pen for 2 to 3 seconds which will then start the recording mode of the spy pen. You will know that the recording mode has started because the light will start blinking to indicate that it is now in recording mode. When you are ready to stop the recording mode just click on the button that you used to turn on the pen and the recording mode and it will then be turned off. If you want your pen to be completely off, then you need to hold the button down for at least 6 seconds and the spy pen will be completely turned off. It's really as simple as that.

Viewing All Of The Video And Pictures That You've Taken With Your Spy Pen After spending your day using your spy pen like a true spy you want to view all of the data you've taken with your pen and you need to plug your pen into the USB port by unscrewing the pen until you see the USB port and then plug it into your computer. After you connect the USB cable to your pen and then to your computer, then wait until the MicroSD shows up on your computer and doubleclick it. Once you do this you will open up all the contents that have been saved to the MicroSD and you can see all of the footage and pictures that you've taken with your spy pen. Another thing you should think about when viewing your videos and pictures is to move all of your files from the MicroSD to your computer so that you can see your footage in the best possible manner you can. Reusing Your Spy

Pen Is As Easy As Erasing The Data On Your MicroSD Card Once you have gotten all the footage off of your MicroSD card you can then erase all of it and have your spy pen ready to use again the next time you feel like having fun and playing around with the spy pen. You can erase all of your data by either deleting each file one by one or using the format function option on your computer which will bring your MicroSD card back to its original state. Either way works just fine and your pen will be ready for the next use. This Step Is For The More Advanced Of The Bunch If you feel like putting a date to all of your information on the MicroSD card or you want to change the date on the card, then all you have to do is connect your spy pen to your computer and you will find a time.txt file and with this file you can change the time and date within the file and then save it after you're done. Once you have done this the time and date will be exactly where you want it to be the next time you are out. This guide is all that you have to do to have your spy pen working exactly like you want.

<https://www.airportlimofortlauderdale.net/wp-content/plugins/formcraft/file-upload/server/content/files/16274838360ad0--brother-copy-machine-manual.pdf>

Please also remember that the greater majority of spy pens use these instructions however they will differ with some spy pens in the market that are created slightly differently. However most will retain the same concepts of the usb and the click on and off.
